

INTEGRATION PROPOSAL

ezyVet Credits Integration

Connecting Good Dog Spa with your
existing ezyVet practice management system

Prepared for: Good Dog Spa / Wigram Vet

Prepared by: SideQuest Development

Date: 17 February 2026

Version: 1.0

01 Executive Summary

A quick overview of what this integration means for your business

The Good Dog Spa website currently has a fully functional **credit-based booking system** that allows your customers to purchase credit packages, view their balance, and book daycare and hydrotherapy sessions. Right now, this system runs independently using demo data.

This proposal outlines how we can **connect that system directly to your existing ezyVet software**, so that credits, client details, pet information, and bookings all stay in sync — eliminating double handling and giving your customers a seamless self-service experience.

The goal: When a customer logs into the Good Dog Spa portal, they see their real credit balance from ezyVet, their real pets, and their real bookings — and can purchase credits and make bookings that automatically appear in ezyVet for your team.

02 What We're Connecting

How the Good Dog Spa portal maps to your ezyVet data

Your ezyVet system already manages clients, animals, appointments, and wellness plan credits. The Good Dog Spa portal has matching features that can be linked directly:

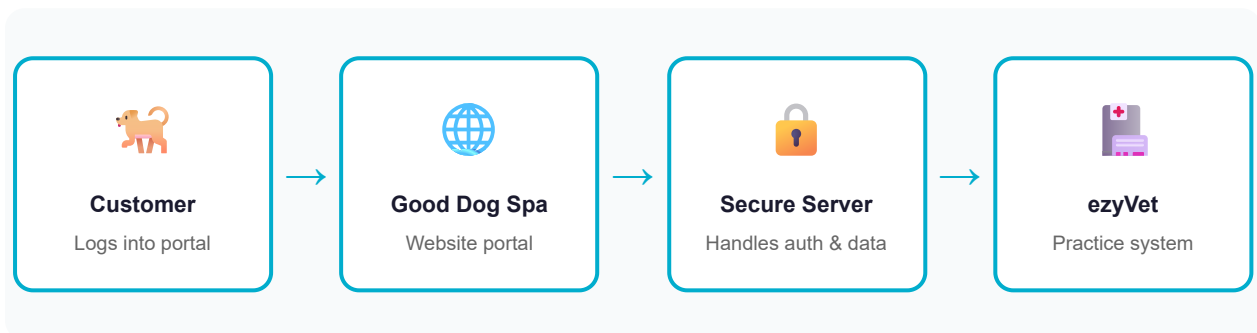

GOOD DOG SPA FEATURE	EZYVET DATA SOURCE	DIRECTION
Customer accounts & profiles	Contacts (clients)	Read from ezyVet
Dog profiles (breed, weight, health)	Animals (patients)	Read from ezyVet
Credit balances (daycare & hydro)	Wellness Plan Billing Credits	Read & Write
Package purchases	Wellness Plan Memberships	Write to ezyVet
Booking creation	Appointments	Read & Write
Transaction history	Invoices & Invoice Lines	Read from ezyVet

Key benefit: Your team continues working in ezyVet as normal. The Good Dog Spa portal becomes a customer-facing window into the same data — no duplicate entry, no data mismatches.

03 How It Works

A simplified view of how the systems connect

ezyVet provides a secure API (a way for software systems to talk to each other) that allows authorised applications to read and write data. We build a secure middle layer that sits between the Good Dog Spa website and ezyVet, handling all the communication.

What happens when a customer uses the portal:

Viewing credits & bookings: The portal requests the customer's data from our secure server, which fetches it from ezyVet's API in real time. The customer sees their actual wellness plan credit balance and upcoming appointments.

Purchasing a credit package: The customer selects a package and pays via secure payment processing. Our server then creates the corresponding wellness plan membership or adds credits in ezyVet, so your team sees the purchase immediately.

Making a booking: The customer picks a date and session type. If they have available credits, the booking is created as an appointment in ezyVet and the credit is consumed — all automatically.

04 Credit System Mapping

How your current credit types connect to ezyVet Wellness Plans

Your existing wellness plans in ezyVet will be configured to match the credit types used on the Good Dog Spa portal:

CREDIT TYPE	SERVICE	EZYVET MAPPING
Full Day	Daycare 7am – 6pm	Wellness Plan Benefit → Full Day product
Half Day	Daycare morning or afternoon	Wellness Plan Benefit → Half Day product
3-Hour	3-hour daycare session	Wellness Plan Benefit → 3-Hour product

CREDIT TYPE	SERVICE	EZYVET MAPPING
Rehab 30min	Hydrotherapy 30 minutes	Wellness Plan Benefit → Rehab 30 product
Rehab 60min	Hydrotherapy 60 minutes	Wellness Plan Benefit → Rehab 60 product

How this works in practice: When a customer purchases a "10x Full Day" package on the portal, a corresponding wellness plan membership is created in ezyVet with 10 Full Day benefits. As bookings consume credits, ezyVet's billing credit system tracks the remaining balance. Both systems stay perfectly in sync.

05 Implementation Plan

The work broken into clear phases

PHASE 1

~1 week

API Access & Configuration

- Register a Private Integration with ezyVet (requires your approval as the clinic)
- Obtain API credentials (partner ID, client ID, secret) for Wigram Vet's ezyVet instance
- Map your existing ezyVet wellness plan products to the 5 Good Dog Spa credit types
- Set up a secure development environment for testing

PHASE 2

~2–3 weeks

Secure Backend Server

- Build a secure server that sits between the website and ezyVet
- Implement OAuth 2.0 authentication and automatic token management
- Add rate limiting and caching to stay within ezyVet's API limits (60 requests/min)
- Build customer authentication (matching portal logins to ezyVet contacts)

PHASE 3

~2–3 weeks

Read Integration (Viewing Data)

- Connect dog profiles — pull real pet data from ezyVet (breed, weight, health info)
- Connect credit balances — show real wellness plan credit balances
- Connect bookings — display actual upcoming and past appointments
- Connect transaction history — show real purchase and usage records

PHASE 4

~2–3 weeks

Write Integration (Creating Data)

- Package purchases — create wellness plan memberships in ezyVet on purchase
- Booking creation — create appointments in ezyVet from the portal
- Credit consumption — automatically deduct billing credits when bookings are confirmed
- Integrate real payment processing (Stripe or Windcave) linked to ezyVet invoicing

PHASE 5

~1–2 weeks

Testing, Polish & Launch

- End-to-end testing with real ezyVet data in a safe test environment
- Staff training — how bookings and credits appear in ezyVet
- Soft launch with a small group of customers
- Full rollout with monitoring and support

Estimated total timeline: 8–12 weeks from API access approval to full launch, depending on ezyVet's onboarding speed and any configuration needed on the ezyVet side.

06 Estimated Costs

Approximate costs for the full read & write integration

ezyVet Fees (paid to ezyVet/IDEXX)

These are charged by ezyVet directly for API access. Exact pricing depends on your existing ezyVet contract and should be confirmed with your ezyVet account manager.

ITEM	TYPE	ESTIMATED COST (NZD)
Private Integration setup	One-off	\$500 – \$2,000
Write-back access fee	Monthly	\$50 – \$200 /month
API consultation (if required)	Per hour	\$150 – \$250 /hr

Recommendation: Contact your ezyVet account manager to get exact API pricing for your clinic. Mention you want to set up a "Private Integration with read and write access" for a customer self-service portal. They can provide a firm quote. Their API support email is apisupport@ezyvet.com.

Development Costs (our work)

PHASE	SCOPE	ESTIMATED COST (NZD)
Build & Integration		
Phase 1: API setup & config	Credentials, mapping, environment	\$800 – \$1,500
Phase 2: Backend server	Auth, security, rate limiting	\$2,500 – \$4,000
Phase 3: Read integration	Dogs, credits, bookings, history	\$2,000 – \$3,500
Phase 4: Write integration	Purchases, bookings, credit usage	\$3,000 – \$5,000
Phase 5: Testing & launch	QA, training, deployment	\$1,500 – \$2,500
Ongoing		
Server hosting	Secure backend server	\$20 – \$50 /month
Maintenance & support	Updates, monitoring, bug fixes	\$200 – \$500 /month

Estimated total build cost	\$9,800 – \$16,500
----------------------------	--------------------

Note: These are approximate ranges. A firm quote will be provided once ezyVet API access terms are confirmed and we've reviewed your specific wellness plan configuration in ezyVet. Payment processing fees (Stripe/Windcave) are additional and typically 2.9% + \$0.30 per transaction.

07 What We Need From You

Items required to get started

- ✓ **ezyVet API approval** — Contact your ezyVet account manager (or we can do this on your behalf) to request Private Integration access with read/write permissions
- ✓ **Wellness plan review** — Share or grant access to your current ezyVet wellness plan configuration so we can map credit types accurately
- ✓ **Product ID mapping** — Confirm which ezyVet products correspond to each of the 5 credit types (Full Day, Half Day, 3-Hour, Rehab 30, Rehab 60)
- ✓ **Test environment access** — Ideally a trial/sandbox ezyVet instance for development and testing (ezyVet can provision this)
- ✓ **Payment processing preference** — Confirm whether you'd like to use Stripe, Windcave (already an ezyVet partner), or another payment provider
- ✓ **Staff contact** — A point of contact on your team who understands your ezyVet setup and can answer configuration questions

08 Benefits For Your Business

What this integration delivers

BENEFIT	IMPACT
No double data entry	Bookings and purchases made on the portal appear in ezyVet automatically
24/7 self-service for customers	Clients can check credits, buy packages, and book anytime — not just during business hours
Reduced admin workload	Less time on the phone taking bookings and processing credit purchases
Accurate credit tracking	One source of truth — credits in the portal always match ezyVet
Better customer experience	Professional, modern portal that builds trust and encourages repeat business
Increased package sales	Easy online purchasing removes friction — customers can buy packages on impulse

09 Next Steps

1. Contact ezyVet for API pricing

Reach out to your ezyVet account manager or email apisupport@ezyvet.com to request Private Integration access and get a firm quote for read/write API access for your clinic.

2. Review & approve this proposal

Let us know if you'd like to proceed, have any questions, or want to adjust the scope (e.g., start with read-only and add write access later to reduce initial cost).

3. Kick-off meeting

Once API access is confirmed, we'll schedule a kick-off meeting to review your ezyVet wellness plan setup, map products, and finalise the development plan.

Alternative approach: If ezyVet API costs are a concern, we can start with a **read-only integration** first (lower ezyVet fees, ~40% less development cost). Customers would see real data but bookings would still need staff confirmation in ezyVet. Write access can be added later.
